China CSC via Dalian University of Technology (Type B): Submission Pack

Deadline 15 Feb 2027 (E2). University comparison: China_Application_Operation.xlsx

Nothing is submitted, signed, sent or paid for you.

Evidence:

- **E1:** verified on the official site
- **E2:** search-indexed official page, not opened from this session (confirm in your browser)

DUT and CSC sites cannot be opened from this session, so every fact is E2.

1. Official links (E2)

Purpose	URL
DUT 2027 English-taught master's programmes	https://sie.dlut.edu.cn/info/1180/2485.htm
DUT CSC Chinese University Program (Type B)	https://sie.dlut.edu.cn/English/Scholarship1/CSC_Scholarship/Chinese_University_Program.htm
DUT Bilateral Program (Type A)	https://sie.dlut.edu.cn/English/Scholarship1/CSC_Scholarship/Bilateral_Program.htm
DUT application portal	http://iso.dlut.edu.cn
CSC online application system	https://www.campuschina.org/ (opens in your browser)
DUT admissions e-mail	dutsice@dlut.edu.cn

2. Eligibility and coverage (E2)

Item	Fact
Requirements	Non-Chinese citizen, bachelor's degree, under 35, good health. No minimum GPA found on any DUT page
English	TOEFL 80 / IELTS 5.5, **or** an English-medium certificate from your university (page versions differ: e-mail 2 asks)
Coverage	Tuition, free campus housing, CNY 3,000/month, insurance. **International travel is self-funded**
Fee	**CNY 400** for CSC applicants
Window	1 Nov 2026 – **15 Feb 2027**; admission notices about Jul–Aug 2027
Agency number	Type B: DUT's own code, **to be confirmed by DUT** (e-mail 2). **Never use another country's embassy number**

Item	Fact
Programme	DUT's CS school lists Computer Science and Technology and Computer Technology; **which are taught in English must be confirmed** (e-mail 2)

Not recommended:

- NPU: CSC applicants need an 80% average.
- HUST: on hold until it confirms whether 2.62/4.00 is acceptable.

3. Written responses (complete drafts)

3a. Study plan / research proposal

Use this as a starting point. Rewrite it in your own words and adjust the programme names to each university. Every [⏳] must be true before you submit.

> **Title:** Observability-driven reliability for digital-payment platforms in emerging markets
>
> **1. Background and motivation.** Ethiopia's payment system is moving quickly from cash to digital channels: card and QR payments at merchants, school-fee payments, and bank-integrated payment gateways. Since [⏳ year] I have worked at SantimPay Financial Solution S.C., a fintech that provides such services together with Ethiopian banks [⏳ verified role]. My work involves keeping these services available: operating Linux servers, deployment pipelines, configuration automation and monitoring [⏳ verified tools]. When a payment service degrades, merchants lose sales and customers lose trust in digital money. In my experience, most failures are noticed late, after users complain, even though warning signs were present in system metrics and logs. This gap between the data we collect and the decisions we take is the problem I want to study.
>
> **2. Academic preparation.** I hold a BSc in Computer Science from Debre Tabor University (2022). My strongest results came in my final year (GPA 3.20), including A− in Advanced Programming, Compiler Design, Complexity Theory and both parts of my final-year project ([⏳ title]). I also studied Introduction to Distributed Systems, Computer Security, Data Communication and Computer Networks, and Database Systems. I am aware that my mathematical foundation is weaker than my programming and systems background, and I will strengthen it during the first year through the programme's core courses [⏳ name them from the programme page].
>
> **3. Research questions.** (1) Which combinations of metrics and log features best predict service degradation in transaction-processing systems before users are affected? (2) How can such detection run with modest computing resources, as is typical for fintech companies in developing countries? (3) How should alerts be designed so engineers act on them quickly without being overwhelmed by false alarms?
>
> **4. Method.** Year 1: core courses in [⏳ e.g. distributed systems, machine learning, data mining, network security, from the programme curriculum]. Year 2, under my supervisor's guidance: build a test environment that replicates a small payment-processing service (open-source components only, no proprietary data), inject realistic faults (latency, resource exhaustion, dependency failures), collect metrics and logs, and compare detection approaches, from statistical thresholds to lightweight machine-learning models. Evaluate them by detection lead time, false-alarm rate and resource cost.
>
> **5. Why China and why Dalian University of Technology.** China operates some of the world's largest digital-payment systems at extremely high transaction volumes, and Chinese universities research large-scale distributed systems and reliability engineering. [⏳ One sentence naming a DUT School of Computer Science and Technology laboratory or professor whose work relates to your topic, taken from cs.dlut.edu.cn] Studying in an English-taught programme will let me learn from this experience directly.
>
> **6. Expected outcome and plan after graduation.** I expect to produce a master's thesis evaluating practical early-warning methods for payment-platform failures, and an open-source test environment others can reuse. After graduating I will return to Ethiopia's financial-technology sector to apply these methods, and to share them with engineers

and students through workshops [⏳ only a real plan]. Reliable digital payments support financial inclusion, which is a shared development goal of Ethiopia and China.

7. Language and adaptation. My bachelor's degree was taught in English [⏳ IELTS result if taken]. I will also study basic Chinese during my first year to take part fully in university life.

Word count: about 650 words in the core text. Expand sections 4 and 5 for each university to reach the length it requires (often at least 800 words).

3b. E-mails (admissions and optional professor)

2a. To the university's international admissions office (Type B)

Subject: Pre-admission enquiry: English-taught Master's in [Computer Science and Technology] with CSC (Type B), 2027

Dear Admissions Office,

I am an Ethiopian applicant to the English-taught Master's programme in [programme] for September 2027, and I wish to be considered for the Chinese Government Scholarship (Chinese University Program, Type B).

I hold a BSc in Computer Science from Debre Tabor University, Ethiopia (2022; CGPA 2.62/4.00; final-year GPA 3.20). Since [⏳] I have worked on payment-platform infrastructure at a fintech company in Addis Ababa.

Could you advise: (1) the 2027 application steps and deadline for Type B; (2) whether a pre-admission letter is issued before the CSC application; and (3) the agency number to use in the CSC system?

I attach my CV and transcript. Thank you for your time.

[Passport name] | [E-mail]

2b. To a professor (send only after reading their recent work)

Subject: Prospective master's student: reliability of payment platforms (CSC 2027)

Dear Professor [Surname],

I read your work on [⏳ specific paper or project, with year] and its approach to [⏳ one precise point]. I am an Ethiopian computer-science graduate working on payment-platform infrastructure, and I am applying to [University]'s English-taught master's in [programme] with a CSC scholarship for 2027.

My proposed topic is early detection of service degradation in transaction systems using metrics and logs (one-page summary attached). Would you consider supervising me, or advise whether the topic fits your group?

Thank you for your consideration.

[Passport name] | [CV attached]

Rules:

- one professor per e-mail

- no mass mailing
- never claim a connection you do not have
- **send nothing without your approval**

4. Documents and formats

See the deep-dive (section “Document checklist”). Extra items for you:

- [ ] Choose the three universities (one top-tier, two potentially more accessible)
- [ ] Study plan adapted per university
- [ ] Pre-admission e-mails approved by you, then sent
- [ ] Medical form and police clearance (allow 2–4 weeks)

5. Outstanding items

1. DUT’s reply (English-taught CS master’s, English proof, agency number).
2. 2 professor or associate-professor letters (DTU).
3. Notarised degree and transcript; physical examination form; police clearance.
4. Study plan names the confirmed programme and a DUT lab or professor.

6. Submission guide

Step	Action	When
1	E-mail DUT international admissions (draft 2a, addressed to dutsice@dlut.edu.cn): ask **which CS master’s are English-taught in 2027**, and confirm the CSC fee (CNY 400) and DUT’s agency number	Now
2	Optional: e-mail one DUT CS professor (draft 2b) after reading one of their papers	Nov–Dec
3	Register at **iso.dlut.edu.cn**; complete the DUT application; note your DUT application number	By 31 Jan
4	Complete the CSC online application with **Type B** and DUT’s agency number	By 10 Feb
5	Upload: passport, notarised degree + transcript, study plan, 2 recommendation letters, physical examination form, police clearance, English evidence (English-medium certificate from DTU if DUT accepts it)	By 10 Feb

Step	Action	When
6	Pay **CNY 400** only after step 1 confirms you are eligible	–
7	**Deadline 15 Feb 2027**; results about Jul–Aug 2027	–

Type A (Ethiopian nomination) runs in parallel. If the MoE opens the 2027/28 call, apply through it as well. After a nomination, DUT issues a pre-admission letter.

7. Final audit checklist

- ☐ Programme confirmed English-taught
- ☐ Agency number confirmed by DUT (Type B)
- ☐ Same agency number on the CSC form and the DUT form
- ☐ Study plan tailored to DUT
- ☐ 2 letters from professors / associate professors
- ☐ Medical form and police clearance valid
- ☐ CNY 400 paid only after eligibility confirmed
- ☐ Submitted by 15 Feb; DUT application number and CSC number saved
